

Innovative solution for polish business

According to the act from April 7, 2006 about informing the employees and running consultations with them, all companies hiring more than 50 employees are obliged to conduct direct and secret election to the employees councils once per 4 years. On 14 July 2010 Essevo Sp. z o.o., the creator and provider of voting via internet solution organized the first in Poland remote election to the employees council of two pharmaceutical companies: Sanof-Aventis Sp. z o.o. and Zentiva Sp. z o.o. Essevo Sp. z o.o. has been established by professor Mirosław Kutylowski, doctor Filip Zagórski, Zbigniew Gołębiewskie oraz Rafał Flis.

Thanks to the ESSEVO system each employee may vote from the place of his or her present location. They will need only a personal computer with access to internet and a typical browser. What is the most important thing, the system fulfills the most strict reliability and security requirements. In comparison to other solutions, you get a guarantee of secrecy of voting, as well as mathematic verifiability of results .It is possible to prove scientifically the propriety of the whole voting procedure, which decides for the superiority of ESSEVO – declares Rafał Flis, the Essevo Partner and President of the Management Board.

The voting system has been created by professor Mirosław Kutylowski, doctor Filip Zagórski and Zbigniew Gołębiewski, and subsequently tested in a fake virtual election with the participation of 6,5 thousand internet users as well as in a real election for a students council of one of the Warsaw Universities. The e-voting solutions are one of the most technologically advances systems in the market.

The first election for the employees councils were absolutely successful. For Essevo, it was an important experience, confirming that advanced technologies and innovative solutions in the domain of e-voting are indispensable in the realization of business needs.
